

CHETAN DEV

Software Engineering Intern Candidate

Bachelor of Engineering (Honours) — Auckland University of Technology

✉ chetandev48@gmail.com

📞 021 081 08272

📍 Flat Bush, Auckland

🚗 Full Driver Licence

PROFESSIONAL STATEMENT

I'm a 23-year-old final-stage software engineering student at AUT — all coursework complete, now seeking an 800-hour industry internship to graduate. Across my degree I've shipped full-stack web applications, embedded systems, and a real-time computer vision system for an industry client. I bring a genuine interest in building things that work, a collaborative team ethic, and a strong ability to pick up new technologies quickly.

SKILLS SUMMARY

Languages

JavaScript (Node.js, React.js, Next.js), Blueprint Visual Scripting (Unreal Engine), HTML/CSS, SQL

Backend & DB

Node.js, REST API design, MongoDB, database schema design, RFID/PLC hardware integration

DevOps & Tools

Git, GitHub Actions (CI/CD), Vercel deployment, ESLint, Prettier, VS Code, Trello

Methodologies

Agile/Scrum, sprint planning, mob programming, test-driven development, pull request workflows

Other

Full driver licence

EDUCATION

Bachelor of Engineering (Honours) — Software Engineering | AUT | 2021 – Present

- All coursework complete; seeking 800-hour internship placement as final graduation requirement.

NCEA Levels 1–3 | Ormiston Senior College | 2018 – 2020

PROJECTS

RFID-Based Pallet Tracking & Warehouse Monitoring System

IFM Electronics, Auckland | 2025 | Node.js · React.js/Next.js · MongoDB · RFID Hardware · REST API

- Built a full-stack enterprise pallet-tracking system for a real industry client, integrating IFM RFID readers, antennas, and PLC controllers into a live Node.js backend with REST API.
- Designed MongoDB schema for pallets, warehouse zones, and role-based user management; delivered a React dashboard for live monitoring and reporting.
- Produced a technical roadmap for AI-based sorting, anomaly detection, and digital twin extensions, along with full architecture documentation for client handover.

SPEED — Scholarly Paper Evaluation & Evidence Database

AUT Team Project | 2024 | [React.js](#) · [Node.js](#) · [Vercel](#) · [GitHub Actions](#) · [Jest](#) · [Agile/Scrum](#)

- Delivered a full-stack article submission, moderation, and search platform in an Agile team with a live product owner, deployed to production on Vercel.
- Set up GitHub Actions CI/CD pipeline running automated frontend and backend test suites on every commit; enforced code quality via ESLint, Prettier, and pull request reviews.

Real-Time Skittles Colour Detection — Raspberry Pi & Computer Vision

AUT Team Project | 2024 | [Python](#) · [OpenCV](#) · [Raspberry Pi](#) · [SQLite](#) · [LAMP Stack](#)

- Designed and built an embedded computer vision system using a Raspberry Pi and camera module to detect and count Skittles by colour in real time using Python and OpenCV.
- Served live colour-count data via a LAMP stack web server with local SQLite storage; used multithreading to manage concurrent video capture and data upload tasks.

Pandemonium: Lost in Limbo — Unreal Engine Horror Game

AUT Team Project | 2023 | [Unreal Engine](#) · [Blueprint Scripting](#) · [GitHub](#) · [Trello](#) · [Agile Sprints](#)

- Personally designed and implemented the in-game inventory system using Unreal Engine Blueprint scripting, resolving complex logic challenges and GitHub merge conflicts across a shared codebase.

WORK EXPERIENCE

Visual Merchandiser | *Noel Leeming, Manukau | ~10 months (Part-time)*

- Managed product presentation and stock rotation across a high-volume consumer technology retail store, maintaining visual standards and floor availability.
- Built strong team communication and customer-facing skills in a fast-paced environment alongside a diverse team.

INTERESTS & ACTIVITIES

Football (competitive, represented school at regional level) · Badminton · Photography · Auckland Mathex representative (Yr 8 & 9) · ICAS Digital Technologies Merit (2017)

REFEREES

Available on request.
